

# A SUSTAINABLE DANISH ENERGY SYSTEM BY 2045

## AAU ENERGY MISSION – JOIN US

At Aalborg University, we are on a mission. We aim to create a sustainable energy system in Denmark by 2045.

We cannot do it alone, but together we can reach our goal.

So, we encourage companies, organizations and authorities to take part.

## THE MISSION IS BROKEN DOWN INTO SMALLER BLOCKS: MISSION PROJECTS

- ✓ Contain a clear delimitation of a problem
- ✓ Have a concrete time frame
- ✓ Involve partners from different sectors

## A CITIZEN-INVOLVED, RESILIENT AND SUSTAINABLE ENERGY SYSTEM

### CITIZEN INVOLVEMENT

We must ensure that citizens are involved in important decisions, so that the energy system implemented respects people and nature.

### RESILIENCE

Our supply sources are crucial for society to function. So, they must be protected from physical sabotage and cyberattacks.

### SUSTAINABILITY

Denmark must be climate neutral by 2050. So, the energy supply must be transformed to replace coal, oil and gas with more renewable energy.

## HOW TO JOIN A MISSION PROJECT

Do you have an idea or suggestion?

We would like your input on the upcoming mission projects which are a collaboration between researchers and external partners from different sectors.

### NEXT STEPS IN A MISSION PROJECT

1. Further development of the mission project in conjunction with partners, including preparation of an implementation plan and the project's societal impact.
2. Support from AAU's fundraising experts for a strong funding application.

## WANT TO HEAR MORE?

If you are with an organization, company or authority, or are in any other way involved in the energy sector, please contact us.
